

Makin' Tool Guidance

Entry-level guidance

Makin' Tool Guidance System is a versatile solution that provides easy-to-use GNSS guidance for various applications in the construction industry. Our system breaks barriers by offering entry-level guidance capabilities based on Makin's well-known machine control system for excavators.

With our all-for-one approach, customers can enjoy the convenience of a single tool guidance solution for multiple machines. This streamlines equipment management reduces costs associated with acquiring separate guidance systems for each machine type, and simplifies maintenance and support processes.

Our system caters to special applications beyond traditional construction tasks. Whether it's precision material spreading or grading, our tool guidance solution offers the versatility to meet diverse project requirements and enhance operational efficiency.

BENEFITS:

- +** Entry-level guidance system
- +** One-for-all
- +** Special Applications Support
- =** Costs savings and increased productivity

Our system is compatible with various construction machines, including but not limited to: Box Blade, scraper, skid steer, and special applications. It caters to a diverse range of equipment, ensuring universal applicability across different job sites.
